UCCP

UNIVERSAL COCKPIT CONTROL PANEL

Less time adjusting. More time flying.

One shortcut. Four essential controls.

COM / NAV / XPDR / QNH

A compact keyboard-first panel for busy phases of flight.

X-Plane 11 tested | FlyWithLua | Development preview

WHY UCCP?

A faster way to handle routine cockpit inputs.

TRADITIONAL COCKPIT	WITH UCCP
Move the view to find controls	**Keep the forward view**
Operate separate radio panels	**Use one compact interface**
Dial or click individual digits	**Type a value directly**
Navigate different locations	**COM, NAV, XPDR, QNH together**
More visual searching	**Fewer interaction steps**

THE BENEFIT

Less searching. Less clicking. More attention to flying.

UCCP complements the aircraft instruments; it does not replace flight monitoring, checklists or pilot judgement.

FOUR ESSENTIAL CONTROLS

01 COM

Enter a frequency quickly; choose standby or deliberate active transfer.

02 NAV

Access navigation radio entry through the same interface.

03 XPDR

Set a four-digit transponder code from the keyboard.

04 QNH

Enter barometric pressure without searching for cockpit knobs.

DESIGNED AROUND KEYBOARD INPUT

The goal: fewer mouse movements during time-critical tasks.

The pilot remains responsible for every applied setting.

TWO VIEWS. ONE WORKFLOW.

Live readouts for COM/NAV, XPDR and QNH.

Type a value, confirm, and return to the main panel.

MADE FOR PILOTS

01 OPEN

Ctrl + Alt + U opens or refocuses the panel.

02 SELECT

C / N / T / Q selects COM, NAV, XPDR or QNH.

03 ENTER

Type digits and press Enter to apply a valid input.

04 CONTINUE

Session mode keeps focus for the next quick task.

05 CLOSE

Escape closes UCCP and returns focus to X-Plane.

Input validation prevents rejected values from being applied.

Specific shortcuts and behavior may evolve before public release.

TODAY AND TOMORROW

ALREADY IMPLEMENTED / TESTED

Keyboard-driven COM, NAV, XPDR and QNH input

Main and Quick Input views

Configurable visual skins

Session workflow and Escape focus return

STILL UNDER TEST

Reliable first-keypress handling for the panel hotkey

Release packaging and compatibility verification

FUTURE IDEAS - NOT PART OF THE CURRENT RELEASE

VATSIM controller awareness

ATC speech recognition with pilot confirmation

BUILT FOR SIM PILOTS

FlyWithLua-based development for X-Plane 11.

Open-source publication is planned after stabilization.
